SUMMARY

Full Stack Developer with 1+ year of production experience across distributed, microservices based platforms. Reduced deployment time by 40% via monolith-to-AWS migration, implemented JWT-based SSO across multi-service architectures, and shipped features in live clinical workflows. Own problems end to end, from design through deployment and incident response.

EXPERIENCE

Full Stack Developer | Ficode India | [Sept 2025 - Present]

- Contributed to a large-scale veterinary surgery simulation platform serving **8,000–10,000 users**, built using **TypeScript**, **7 independent microservices**, and Distributed Systems principles, extending distributed modules by following established service-to-service communication and data isolation patterns.
- Designed and developed scalable **RESTful APIs** using Node.js and Express to power core platform functionality.
- Owned the implementation of **Single Sign-On (SSO)** using SurfConext, handling **JWT**-based token propagation and secure session lifecycle management in a distributed environment.
- Contributed to migrating monolithic deployment to AWS EC2, S3, CloudFront, SES, and Secrets Manager, reducing deployment time by 40% via GitHub Actions CI/CD pipeline; used **CloudWatch** for monitoring service health and diagnosing production issues.
- Containerized **Redis** using **Docker** to manage caching across microservices, improving repeated data retrieval performance and simplifying local development environment setup.
- Owned iOS and macOS delivery using **Capacitor** and **Electron**, implementing **jailbreak detection** for clinical security compliance and resolving critical shutdown bugs caused by unmanaged background threads.

Full Stack Developer | GrayCell Technologies | [Jan 2024 - June 2024]

- Refactored API response handling and optimized **SQL Server** query performance, reducing average response times by **25%** across core application endpoints.
- Established a structured debugging and triage workflow for production incidents, cutting average resolution time by **40%** and reducing repeat occurrences through root-cause documentation.
- Delivered **15+ features** in collaboration with cross-functional teams, consistently meeting sprint deadlines in an Agile development environment.

PROJECTS

Music Streaming Platform | [GitHub](#)

- Built a full-stack music streaming platform using the **MERN stack**, replicating core streaming UX with real-time audio playback, queue management, and song progress tracking.
- Architected global state using **Zustand** to synchronize audio playback, progress bar, and UI components across the application without prop drilling or redundant re-renders.
- Integrated **Clerk** for end-to-end authentication and authorization, enabling secure user sessions and protected route access.
- Built a reusable component library using **ShadCN** and **Tailwind CSS**, reducing per-feature UI development time through composable, consistent design patterns.

- Built a restaurant discovery app integrating the **Google Places API** to surface real-time restaurant data including photos, ratings, and location details.
- Rendered restaurants as interactive map cards using **MapBox GL**, providing spatial context for nearby dining options.
- Implemented location-based search with auto-complete using **MapBox Forward Geocoding API**, enabling city and neighbourhood-level discovery.
- Reduced redundant API calls by implementing **debounced input handling**, improving performance and staying within Google Places API rate limits.

EDUCATION

- **Bachelor’s in Computer Science and Engineering** 2019 - 2023
Chandigarh University, Punjab
- **Intermediate** 2018 - 2019
Spring fields college, Moradabad
- **Matriculation** 2016 - 2017
Spring fields college, Moradabad

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Backend: Node.js, Express.js, RESTful APIs, Microservices Architecture, Redis, BullMQ, Cron Jobs

Frontend: React.js, Zustand, Tailwind CSS, ShadCN

Databases: MongoDB, PostgreSQL, SQL Server

Cloud & DevOps: AWS (EC2, S3, CloudFront, SES, Secrets Manager, CloudWatch), Docker, GitHub Actions, CI/CD

AI Tools: GitHub Copilot, Cursor

Tools: Postman, Git, GitHub, VS Code
